- **SBX Pro Studio Surround** - provides immersion control to enhance the natural sense of audio depth and spaciousness by creating virtual surround sound channels. Stereo content or multi-channel content will sound as if its coming from all sides while voices remain centered in front and original balance and timbre is preserved.

Consumers no longer have to tolerate a lack of bass in speakers as the SBX Bass technology dramatically improves the sound experience even in the absence of a subwoofer.
- **SBX Pro Studio Dialog Plus** - enhances the voices in movies for clearer dialog, allowing the listener to hear the dialog over the rest of the soundtrack and over ambient noise in the listening environment.

Troubleshooting

Problems with Multiple Audio Devices

The onboard audio chipset seems to be in conflict with Sound Blaster Tactic3D Fury

Disable your computer's onboard audio chipset. See your computer's motherboard documentation for details.

Problems with sound

No sound from the headset.

Check the following:

- The volume settings in Sound Blaster Tactic(3D) Control Panel and system audio are properly adjusted and not muted.
- There is no hardware conflict between the headset and a peripheral device.
- The headset is selected as the default audio device. Ensure that existing analog headset is disconnected.

There is clipping/distortion during audio playback.

Check the following:

- Your computer system should be running in high performance mode. You may need to disable any power saving features.
- The music source may be distorted. Ensure that the music played has no distortion.
- Ensure that the software graphical equalizer or sound processing effects found in third party media players are disabled.

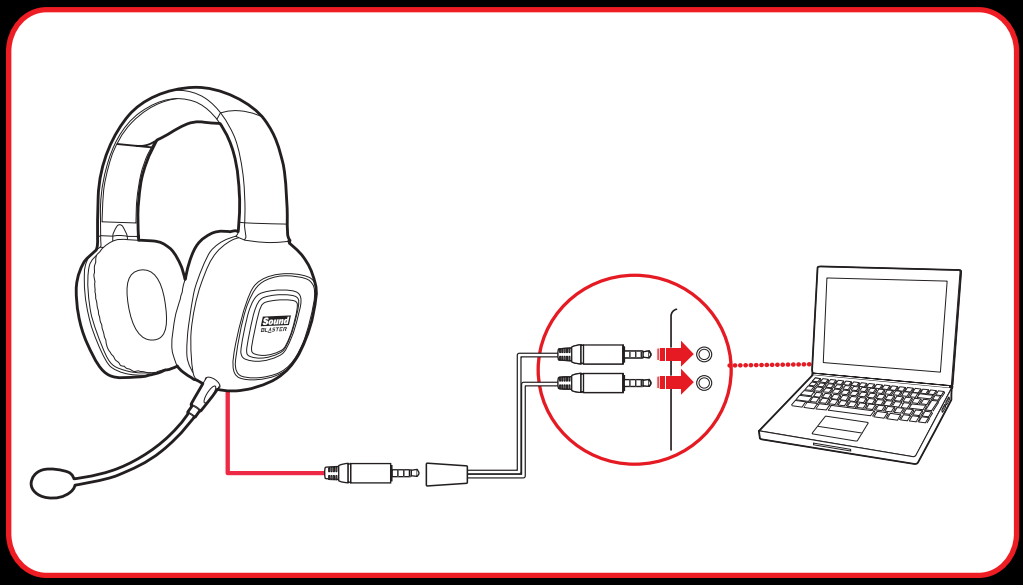
Problems with SBX Pro Studio

Some features are disabled when playing certain games.

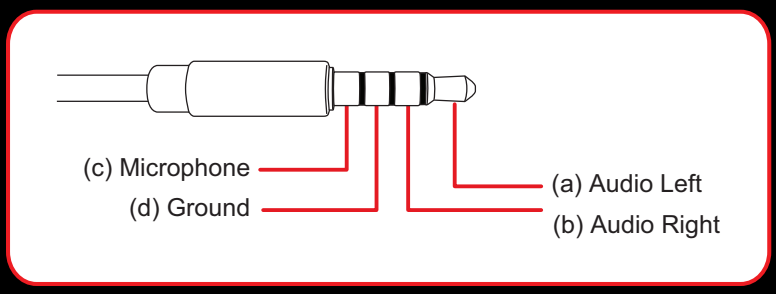
When playing games that use DirectSound3D or OpenAL sound engines, certain audio features will be disabled automatically. This is to avoid distorting the environmental audio cues present in the game. These features will be re-enabled automatically when you exit the game.

Additional Guide for Windows Users

In the event a user wishes to connect the headset via a 4-pole cable to a PC / notebook, it is recommended to purchase a Y-splitter for best audio.



Generally a 4-pole stereo cable bundle allows you to connect your headset to your iPhone / Android phone / tablet. However, some phone / tablet's 4-pole female jack has different configuration and this cable is unable to support if the configuration is different from the jack (bundled) as illustrated below:



Should you be keen to connect your headset to an MP3 Player, you will need to check if the configuration of its 4-pole female jack is compatible.

Safety Information

Refer to the following information to use your product safely, and to reduce the chance of electric shock, short-circuiting, damage, fire, hearing impairment or other hazards. Improper handling may void the warranty for your product. For more information, read the warranty available with your product.

- Do not dismantle or attempt to repair your product.
  Refer all servicing to authorized repair agents.
- Do not expose your product to temperatures outside the range of 0°C to 45°C (32°F to 113°F).
- Do not pierce, crush or set fire to your product.
- Keep your product away from strong magnetic objects.
- Do not subject your product to excessive force or impact.
- Do not expose your product to water or moisture.
  If your product is moisture-resistant, take care not to immerse your product in water or expose it to rain.

Earphones

- When a conductive apparatus, such as earphones, is used in close proximity with a CRT television or CRT monitor, the latter may emit an electrostatic discharge. This electrostatic discharge can be felt as a static shock. While this static shock is usually harmless, it is good practice to avoid close contact with CRT devices when using earphones.
- Do not listen to audio on your earbuds or headphones at high volume for prolonged periods of time as hearing loss may result. For users in the United States, go to www.hei.org for more information.
- Do not listen to your audio device at high volume when driving, cycling or crossing the road, especially in heavy traffic or any other traffic condition where such use will hinder safe travel on the roads. We recommend that consumers be extremely cautious when using this device on the road.

Avoid Hearing Damage

Permanent hearing loss may occur if the headphone is used at high volume. Set the volume to a safe level. You can adapt over time to a higher volume of sound that may sound normal but can be damaging to your hearing. If you experience ringing in your ears or muffled speech, stop listening and have your hearing checked. The louder the volume, the less time is required before your hearing could be affected. Hearing experts suggest that to protect your hearing:

- Limit the amount of time you use the headphone at high volume.
- Avoid turning up the volume to block out noisy surroundings.
- Turn the volume down if you can't hear people speaking near you.
